provides a lot of native DDE components, to accomplish file transfer between applications and to automate applications such as Internet Explorer, MS Outlook or other programs on the user's computer. AutoCAD has the capability to communicate with many software applications, such as raster graphics editors, on the user's computer, and to exchange drawing information, including 3D-geometry and DWG. With the use of the Autodesk Exchange Apps, the user can choose from a number of applications, such as Internet Explorer, Word, PowerPoint, PhotoShop, and Autodesk, to connect to their AutoCAD system. VBA is the programming language used by AutoCAD to add macros and automation to AutoCAD and other AutoCAD applications. AutoCAD has extensive VBA support. VBA is primarily a scripting language with its own syntax. However, its use has gradually been replaced by the addition of "Visual LISP" capabilities to the products' programming toolset. The programming language Visual Basic, and its variant Visual Basic for Applications (VBA), is used to create software applications in other AutoCAD-based applications. AutoCAD and AutoCAD LT can be controlled using Windows COM automation interface, which was first released in AutoCAD 2000, and is still a part of AutoCAD 2002 and later. The Autodesk Exchange Apps allow control of AutoCAD from other applications, such as Microsoft Outlook and Internet Explorer. AutoCAD can also be controlled using an XML-RPC interface, which is provided by Autodesk Exchange Apps, and is built into AutoCAD for XML. Prior to AutoCAD 2010, AutoCAD was generally designed to be controlled using a command-line interface (CLI), which was not commonly used by CAD users. With the introduction of AutoCAD 2010, the CLI was greatly improved and is widely used. AutoCAD 2008 introduced an integrated, GUI-based command-line interface, which many CAD users find easier to use. AutoCAD also has the ability to connect with other software via the UniData Data Exchange (UDX) functionality, allowing users to link to UniData SQL Server, which is a relational database management system. As a result, AutoCAD functions can be created and accessed with the use of the .NET technology. A .NET Application Programming Interface (API) allows the creation of new AutoCAD applications.
